

AUTOMATION EXECUTION REPORT

Tichi Web Application • Login Module Automation

1. Revision History

Version	Date	Description	Prepared By
1.0	28 June 2026	Initial Automation Execution Report — Core Login Workflow	Ezhiloviyen S

2. Project Information

Project Name	Tichi Web Application
Module	Login
Environment	Stage
Application URL	https://tichi-app-webapp-stage.web.app
Automation Tool	Selenium WebDriver
Programming Language	Java
Test Framework	TestNG
Build Tool	Maven
Browser	Google Chrome
Execution Date	28 June 2026
Tester	Ezhil Oviyan

3. Objective & Scope

The objective of this automation cycle was to automate the verification of the Login functionality for the Tichi Web Application and programmatically validate the application's behavior against standard authentication workflows using Selenium WebDriver. Testing was executed comprehensively within the Stage environment to ensure maximum stability and readiness.

4. Test Scenarios Executed

Test Case ID	Test Scenario	Status
AUTO_TC_001	Verify Login page loads successfully	Pass
AUTO_TC_002	Verify Email Address field is displayed	Pass
AUTO_TC_003	Verify Continue button is displayed	Pass
AUTO_TC_004	Verify "Continue with Google" button is displayed	Pass
AUTO_TC_005	Verify validation message for empty Email field	Pass
AUTO_TC_006	Verify invalid email format validation	Pass
AUTO_TC_007	Verify successful navigation using a valid email	Pass

5. Test Execution Summary

Metric	Count / Value
Total Test Cases	7
Passed	7
Failed	0
Skipped	0
Pass Percentage	100%

6. Execution Results & Observations

The automation suite executed flawlessly with no compilation, execution, or environment-related failures. All planned login scenarios achieved an absolute pass rate.

Summary: The application correctly validated empty and invalid email inputs, accurately rendered all key user interface components, and progressed seamlessly to the next stage of the workflow when a valid email address was supplied.

Defects Observed During Automation: No infrastructure defects or script failures were encountered during execution.

7. Tools & Technologies Used

- **Automation Tool:** Selenium WebDriver
- **Programming Language:** Java
- **Test Framework:** TestNG

- **Build Tool:** Maven
- **Driver Management:** WebDriverManager
- **Target Browser:** Google Chrome

8. Conclusion

The automated regression suite for the Login module has passed with full integrity. The automated validation baseline confirms that the login flow handles standard operational patterns as expected under the defined test scenarios.

This Automation Execution Report has been compiled in accordance with standard test automation reporting procedures. For questions or expansions regarding the regression scope, please reach out to the QA engineering lead.
